

Trees Please

Tree-lined streets are as American as apple pie and baseball.

A tree can provide:

- ◆ Shade in the summer
- ◆ Wind protection in the winter
- ◆ Traffic noise reduction
- ◆ Songbird nesting spots
- ◆ Clean air

Trees can also help when there is too much rainwater. They can help rainwater soak into the ground and keep your soil from washing away into the lake. Stormwater is not treated or filtered.

Trees can increase property values as well. Make an investment in your home, community, and clean air and water – Plant a Tree.

Ready for a rainy day?
